

Reasons to choose NOD32 Antivirus Software

1. Unmatched, consistent virus detection performance

NOD32 is the only AV product that has not missed a single ItW (in the wild) virus in over 5 years of testing by respected antivirus publication Virus Bulletin. This achievement has resulted in NOD32 being awarded 23 VB100% Awards, that's more than any other AV product.

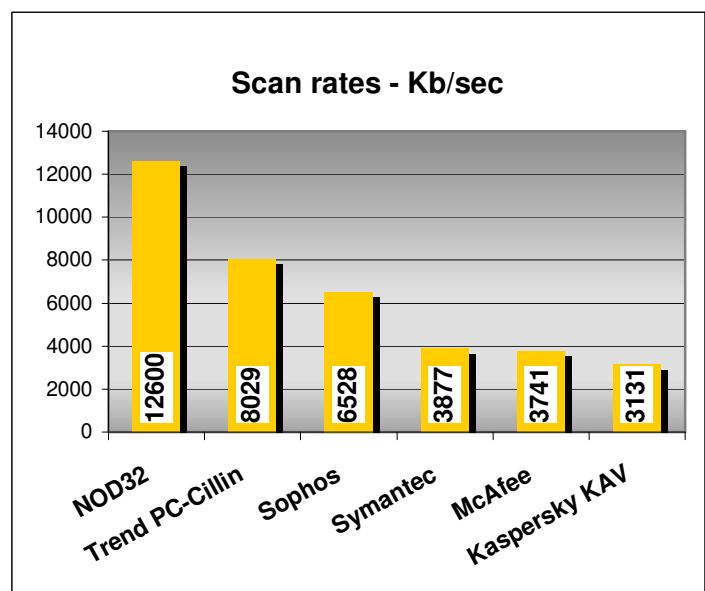

This graph shows the number of viruses missed in 6 on-demand and on-access tests carried out by Virus Bulletin between June 02 and Nov 03 on Netware, 2000, NT, XP and 2003 operating systems. Note: Symantec and Trend did not provide a product for testing on Netware. Full test data is available on request.

2. Fastest scan speed PLUS low system overhead

As well as accuracy, NOD32 is also one of the fastest scanners. While some other products increasingly suffer as “bloatware”, NOD32’s efficient programming maintains maximum speed and minimum system overhead.

This graph shows the average throughput while scanning executable files in 6 tests carried out by Virus Bulletin between June 02 and Feb 03 on Netware, 2000, NT and XP operating systems. Note: Symantec and Trend did not provide a product for testing on Netware. Full test data is available on request.

3. Price

NOD32's pricing is very competitive for personal and corporate licences. Special discounts are available for educational and charitable organisations. Furthermore, NOD32's licence includes virus updates AND program upgrades, so no more enforced and expensive upgrading.

4. Complete range of solutions

Desktop – Windows 95, 98, ME, NT, 2000, XP, DOS and LINUX.

Server – Windows NT, 2000, 2003, Netware, LINUX

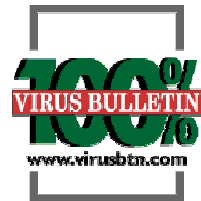

Email – Exchange, Linux, Domino, Kerio

5. Support

NZ based support, with escalation to international distributor network, and to the developers. Also, free access to public NOD32 web forum.

6. Awards

NOD32 has been awarded more VB100% awards than any other AV product. The VB Awards are especially well regarded because of the status of VB Magazine in the AV world, their complete absence of commercial motive (with the products), their thorough testing methodology, their refusal to allow ANY retests, and their uncompromising attitude to "false-positives". NOD32 did miss one VB100% award in Nov 2000, it detected every virus, but false-alarmed on one = no award.

Each year, PowerTools Forum selects the most powerful applications in a number of areas. NOD32 was awarded PowerTool Certification as the best antivirus program choice for 2003

ICSA Labs' Product Certification Program provides assurance to the user community that anti-virus products attaining the ICSA CERTIFIED rating reduce security risks caused by viruses and other malware consistent with a set of publicly vetted and industry-accepted criteria.

NOD32 was named Australian PC User's "Best Antivirus of 2002", retaining the award it won in 2001!

NOD32 Awarded "Best Antivirus Program of 2002" by PC Chip Magazine Croatia
